Empowerment Support Solutions, LLC

SDP • Person-Centered Plan (PCP) for Eric

Date: 1/8/2026

# Section 1 — PCP Overview

## Meeting details & participants

This page mirrors what Regional Centers expect to see on a formal PCP cover sheet.

**PCP conducted by (John Doe)**

This Person-Centered Plan was conducted by Empowerment Support Solutions, LLC in collaboration with Eric Lopez and his family to clearly document Eric's current needs, safety risks, goals, and the level of supervision required for him to remain stable and safe in the community.

**Format (in-person / virtual / hybrid)**

In person

**PCP meeting date(s)**

1/6/2026

**Location(s)**

Starbucks Coffee Shop

**People who participated (family, Eric, ESS staff, Regional Center, others)**

Eric Lopez and Empowerment Support Solutions, LLC staff.

**Summary statement (brief overview of what this PCP focuses on)**

This PCP focuses on Eric’s need for continuous supervision and structured support due to repeated safety incidents, medication noncompliance without direct assistance, frequent elopement behavior at unpredictable times, lack of a stable daily schedule, and increased vulnerability to harm in the community. This plan documents why Eric requires consistent, agency-level monitoring and coaching throughout the day and night to prevent repeat incidents and to build a safe foundation for long-term goals such as employment, relationships, and independent housing

## Section 2 — Personal Profile

### Who Eric is as a person

Keeps Eric’s voice and preferences at the center of all services.

#### What people like & admire about Eric

People who know Eric describe him as someone who wants a better life for himself and expresses hopes about his future, including working a real trade job, having a relationship, and eventually living independently. Despite his current instability, Eric shows that he wants to be seen as capable and respected, and he often responds better when support is consistent, calm, and structured.

#### Eric’s strengths

Eric has clear long-term goals and he is able to communicate what he wants when he feels safe and supported. Eric is capable of learning practical skills when instruction is hands-on, repeated, and delivered in real settings, and he shows more stability when expectations are consistent and supervision is present.

#### Communication style

Eric communicates verbally and can express preferences and frustration, but his follow-through and decision-making become unreliable when he is unsupervised. Eric benefits from simple, direct communication, clear boundaries, and immediate coaching to help him understand consequences and make safer choices.

### Important TO Eric

It is important to Eric to feel independent, to be treated like an adult, and to have freedom of movement. Eric also values the idea of having a job in the future, being in a relationship, and eventually having his own place, and he wants a life that feels normal and self-directed rather than controlled.

### Important FOR Eric

It is important for Eric to have continuous supervision and predictable structure because his current pattern of unsafe choices and elopement places him at high risk of serious harm. It is also important for Eric to have direct medication support, consistent monitoring of whereabouts, and ongoing safety planning because he does not reliably protect himself or follow essential routines without hands-on assistance.

### Sensory needs

Eric does best in environments that reduce stress and chaos, and he benefits from support that is calm, consistent, and not emotionally escalated. When overstimulated or frustrated, he requires immediate redirection and structured support to prevent impulsive decisions.

### Behavioral & emotional considerations

Eric demonstrates impulsive decision-making and unpredictable elopement behavior, including leaving during the day and at night without notice. Eric’s history shows that when he is not supervised, he is likely to place himself in unsafe situations and may not return as expected, requiring immediate safety response and active monitoring.

Health & safety considerations

Eric has a documented history of high-risk outcomes when unsupervised, including serious incidents such as being shot and involvement in accidents. Eric also has a criminal record that increases the importance of preventative structure and supervision, because instability, elopement, and poor decision-making can lead to repeated legal involvement or victimization. Eric is prescribed medication but does not consistently take it without direct support, which creates additional health and behavioral instability risks.

Cultural or personal identity notes

Eric’s plan should respect his identity as an adult who wants independence and a normal future, while also acknowledging that safety and structure must come first due to his current functioning and documented risk history.

## Section 3 — Daily Routines & Life

### How Eric spends his days

Supports Regional Center to see where ESS fits into daily life.

Morning routine

Eric does not currently have a consistent morning routine and will often start days without a clear plan, which increases the likelihood of impulsive decisions and leaving the home without notifying anyone.

Afternoon routine

Eric does not follow a predictable afternoon schedule and is not currently engaged in school, a day program, or employment, which creates long periods of unstructured time where he is more likely to elope or enter unsafe environments

Evening routine

Eric’s evenings are not structured, and his pattern includes leaving without notice, including during late hours, which requires active monitoring and safety planning.

### Community routines

Eric’s community involvement is inconsistent and not tied to a structured schedule. Without supervision, Eric’s community access becomes high-risk due to his history of accidents, victimization, and unpredictable whereabouts.

### What helps Eric during stress

Eric benefits most from immediate, in-person support that uses calm redirection, simple choices, and consistent boundaries. Eric responds better when staff provide structure, help him regulate in the moment, and guide him toward safer decisions rather than expecting him to self-correct independently.

### Known triggers

Unstructured time, conflict, boredom, frustration, and feeling controlled can increase Eric’s impulsivity and raise the likelihood that he will leave without notice. Lack of direct supervision is a major trigger for unsafe outcomes because Eric does not consistently pause, plan, or consider consequences when alone.

## Section 4 — ELARC Life Areas & Outcomes

### Life Area 1 — Choice / Advocacy

Eric’s choices, decision-making, and self-advocacy (including supported decision-making).

### Goal in this life area

Eric will participate in structured, supported decision-making so he can express choices safely while learning boundaries that prevent elopement, unsafe community access, and high-risk situations.

### Why this matters

Eric wants independence, but he currently demonstrates unsafe decision-making when unsupervised, and his history shows that freedom without supervision leads to serious harm and legal risk.

### Current barriers

Eric does not reliably plan ahead, notify others, or follow safety agreements, and he frequently leaves without notice at unpredictable times.

### Teaching & support strategies

Staff will provide in-the-moment coaching, use supported decision-making tools, reinforce safety agreements, and practice safe choice-making repeatedly in real situations so Eric can learn what independence looks like with safeguards.

### Progress measurement

Progress will be measured by Eric’s ability to communicate his plan, remain within agreed safety boundaries, and demonstrate safer choices with reduced incidents of unplanned leaving.

### ESS Staff responsibilities

ESS staff will provide consistent supervision, real-time coaching, and safety monitoring, and will document patterns and triggers to strengthen preventative strategies.

### Timeline / expected progress

Eric is expected to show gradual improvement only after a sustained period of consistent structure and continuous supervision that reduces crises and stabilizes routines.

## Life Area 2 — Education / Learning

Goals around learning, training, and lifelong education inside or outside formal school settings.

### Goal in this life area

Eric will build readiness to participate in structured learning by developing a consistent daily routine, improving follow-through, and completing basic skill-building sessions with staff support so he can prepare for vocational training aligned with his long-term goal of plumbing.

### Why this matters

Education and training are necessary stepping stones for Eric to achieve meaningful employment and long-term independence, but right now his lack of structure and frequent elopement prevent him from safely and consistently participating in any learning environment.

### Current barriers

Eric is not currently attending school, a program, or training, and he does not maintain a predictable schedule that supports learning or daily follow-through. Eric’s history of leaving the home without notice for hours at a time, including during nighttime hours, creates a safety barrier that must be stabilized before he can reliably engage in education or training.

### Teaching & support strategies

Staff will build a stable foundation by creating a daily structure with Eric and practicing it consistently through real-time prompts, reminders, and coaching. Staff will provide supervised learning routines in the home and community, support Eric in completing short skill-building tasks that increase attention and follow-through, and reinforce participation through consistent expectations and immediate feedback. Staff will also support Eric in exploring basic vocational learning steps related to plumbing readiness once safety and routine stability improve.

### Progress measurement

Progress will be measured by Eric’s ability to participate in scheduled learning sessions with staff, complete planned tasks without leaving unexpectedly, and demonstrate improved routine consistency over time. Progress will also be tracked through reductions in missed sessions due to elopement and increased ability to remain present for structured activities.

### ESS Staff responsibilities

ESS staff will provide continuous supervision and monitoring to ensure Eric remains safe and available for learning activities, and staff will provide coaching to increase consistency, build routine tolerance, and prevent elopement-related disruptions. Staff will document participation, barriers, and patterns, and adjust strategies based on what improves stability.

### Timeline / expected progress

Eric is expected to show early progress only after a sustained period of routine-building supported by continuous supervision and overnight safety monitoring, because improved learning participation is dependent on stabilizing safety and preventing unpredictable absences.

## Life Area 3 — Employment

Exploring and preparing for competitive integrated employment or meaningful day/work programs.

### Goal in this life area

Eric will move toward employment readiness by developing daily structure, safety stability, and basic work behaviors with consistent staff support, with the long-term goal of pursuing a plumbing-related job path once his safety risks and elopement patterns are significantly reduced.

### Why this matters

Eric has stated that he wants to work as a plumber, and employment is directly tied to his goals of independence, housing, and building a stable adult life. Eric cannot realistically move toward employment while he lacks routine, has unpredictable absences, and remains at high risk in the community without supervision.

### Current barriers

Eric is not currently employed and is not participating in any day program, school, or structured daily activity. Eric frequently leaves the home without notice for hours, including overnight, which creates a major barrier to reliability, attendance, and safety. Eric’s current instability and upcoming court involvement further increase the need for consistent structure and supervision to prevent additional legal and safety consequences.

### Teaching & support strategies

Staff will establish a stable routine that mirrors employment expectations by teaching time awareness, planned daily activity blocks, task completion, and appropriate behavior in structured settings. Staff will provide supervised community practice to build responsibility and reliability, including attending scheduled appointments and completing responsibilities on time. Once Eric demonstrates improved stability and reduced elopement incidents, staff will support exploration of entry steps for plumbing-related employment such as researching training pathways, preparing for applications, and practicing appropriate work-site behavior.

### Progress measurement

Progress will be measured by Eric’s ability to follow a daily schedule, attend planned activities consistently without leaving unexpectedly, and complete task routines that reflect work readiness. Stability will also be measured by a sustained reduction in elopement incidents and improved participation in structured community-based activities.

### ESS Staff responsibilities

Progress will be measured by Eric’s ability to follow a daily schedule, attend planned activities consistently without leaving unexpectedly, and complete task routines that reflect work readiness. Stability will also be measured by a sustained reduction in elopement incidents and improved participation in structured community-based activities.

### Timeline / expected progress

Eric’s employment readiness will require a longer timeline because stability and safety must be established first through consistent supervision and routine development. Early progress is expected once predictable structure is maintained and elopement is significantly reduced over a sustained period.

## Life Area 4 — Healthcare / Wellness

Medical, dental, mental health, and general wellness routines and support.

### Goal in this life area

Eric will improve health stability by consistently following medical and wellness routines with direct support, including taking prescribed medication as directed and participating in basic health planning with staff supervision.

### Why this matters

Eric’s health and safety risks increase substantially when he refuses medication and lacks monitoring, and medication adherence is a key protective factor for stability and reduced crisis risk. Health stability is also essential for preventing incidents that lead to harm, legal involvement, or unsafe community situations.

### Current barriers

Eric is prescribed medication but refuses to take it without direct support and monitoring. Eric’s unpredictable leaving behavior, including overnight elopement, disrupts routines and increases the risk that medical and safety needs will be neglected. Eric does not independently follow through with appointments or wellness routines, and gaps in support increase the likelihood of instability.

### Teaching & support strategies

Staff will provide direct medication prompting, supervision, and follow-through as part of daily routine support, and staff will use consistent structure to build medication adherence as a non-negotiable safety routine. Staff will coach Eric using simple, consistent reminders, reinforce compliance, and track adherence patterns. Staff will also support Eric in attending medical appointments when needed, practicing basic wellness routines, and building awareness of how health routines connect to independence goals.

### Progress measurement

Progress will be measured by consistent medication adherence with reduced refusal behavior, improved participation in daily wellness routines, and increased follow-through with planned healthcare actions while remaining safe and supervised. Progress will also be tracked through reductions in behavioral crises and safety incidents linked to instability.

### ESS Staff responsibilities

ESS staff will provide continuous supervision and monitoring across day and overnight hours to ensure Eric does not leave unsafely and to maintain health routines without interruption. Staff will support medication adherence directly, document patterns of refusal and compliance, coordinate with family as needed, and implement immediate safety interventions when risk escalates.

### Timeline / expected progress

Health and medication stability is expected to improve gradually as routines become consistent and continuous supervision prevents disruption from elopement. The timeline depends on sustained structure, because progress cannot occur during repeated safety lapses and unpredictable absences.

## Life Area 5 — Home Life / Housing

Where Eric lives, how daily life at home works, and what housing goals he has.

### Goal in this life area

Eric will increase stability at home by developing consistent daily routines, improving follow-through with responsibilities, and reducing unsafe leaving behavior so that long-term housing goals become realistic and safe.

### Why this matters

Eric wants to have his own place one day, but independent housing is not safe or feasible while he has unpredictable elopement behavior, poor routine stability, and medication noncompliance without direct support. Home stability is the foundation for every other goal in his plan.

### Current barriers

Eric lives with family and does not maintain a daily schedule or consistent responsibilities at home. Eric leaves the home without notice for hours and also leaves during the night, which creates an ongoing safety risk that the family cannot reliably manage without structured staffing and overnight monitoring. Without continuous supervision, the home environment becomes a setting where risk escalates rather than stabilizes.

### Teaching & support strategies

Staff will establish a structured daily routine that includes predictable wake, hygiene, meals, responsibilities, and planned activities, and staff will provide in-the-moment coaching to keep Eric present and engaged rather than leaving without notice. Staff will teach household responsibilities in a hands-on way and use consistent expectations that are reinforced daily. Staff will also implement overnight safety monitoring and prevention strategies to address nighttime leaving and reduce risk during the most vulnerable hours.

### Progress measurement

Progress will be measured by Eric’s ability to remain safely at home during planned hours, communicate his plans before leaving, complete routine responsibilities, and demonstrate reduced incidents of leaving without notice. Progress will also be tracked through improved participation in structured home routines and fewer safety interventions needed.

### ESS Staff responsibilities

ESS staff will provide continuous supervision across day and overnight hours to prevent unsafe leaving, maintain structure, and support responsible routines. Staff will coordinate with family, document safety incidents, and adjust strategies to strengthen prevention and stabilization.

### Timeline / expected progress

Eric’s home stability will improve over time only with consistent supervision and overnight monitoring that prevents repeated incidents. Early progress is expected when routines are implemented daily and nighttime elopement prevention is maintained consistently.

## Life Area 6 — Personal / Emotional Growth

Emotional well-being, coping skills, mental health growth, and self-improvement.

### Goal in this life area

Eric will build emotional stability by improving impulse control, practicing coping strategies in real situations, and developing the ability to pause and seek support rather than leaving unsafely.

### Why this matters

Eric’s emotional instability and impulsive decision-making directly contribute to high-risk behavior, including leaving without notice and entering unsafe situations. Emotional growth is necessary for safety, legal stability, and meaningful progress toward work and independence.

### Current barriers

Eric’s behavior becomes unpredictable when he is stressed, frustrated, bored, or feeling controlled, and these moments often lead to leaving without notice. Eric lacks a consistent routine that reduces emotional escalation, and he does not reliably self-regulate without direct coaching and supervision.

### Teaching & support strategies

Staff will provide immediate coaching during stress and will teach Eric simple coping strategies that can be practiced in the moment, including structured breaks, redirection, and regulated decision-making. Staff will reinforce consistent expectations, practice de-escalation skills during real-life triggers, and help Eric learn to communicate needs before escalation leads to unsafe departures. Staff will also support overnight monitoring and safety planning because emotional dysregulation can occur at any hour and has led to nighttime elopement.

### Progress measurement

Progress will be measured by reduced frequency and intensity of dysregulated episodes, increased use of coping strategies with staff prompting, and fewer incidents of leaving without notice during stress. Progress will also be tracked through improved ability to communicate needs and remain engaged in structured routines.

### ESS Staff responsibilities

ESS staff will provide continuous supervision and real-time emotional coaching, intervene early when escalation begins, and document patterns that lead to elopement or unsafe behavior. Staff will support consistent routines that prevent emotional destabilization and provide overnight safety monitoring to reduce nighttime risk.

### Timeline / expected progress

Emotional stability will build gradually through consistent daily practice and continuous supervision that prevents crises and reinforces safe behavior. Sustained progress requires long-term consistency because setbacks are likely when structure is interrupted.

## Life Area 7 — Relationships

Family, friends, and important people in Eric's life and how he wants those relationships to grow.

### Goal in this life area

Eric will develop healthier relationships by improving stability, practicing safe communication, and learning appropriate social boundaries so that future goals such as finding love and building a stable adult life can become realistic.

### Why this matters

Eric wants a relationship and a normal adult future, and relationships require stability, reliability, and safety. Without consistent supervision and improved follow-through, Eric's social life becomes high-risk and can lead to unsafe environments, legal consequences, or victimization.

### Current barriers

Eric's lack of structure, unpredictable absences, and high-risk community behavior make it difficult for him to maintain safe, healthy relationships. Eric does not consistently communicate plans or whereabouts and leaves without notice, which increases conflict, instability, and vulnerability.

### Teaching & support strategies

Staff will coach Eric in safe social decision-making, communication skills, and boundaries in real settings, and staff will guide him toward appropriate social environments that reduce risk. Staff will practice structured social routines and reinforce responsible choices, including communicating plans and remaining within safe boundaries. Staff will support stability across day and overnight hours because unsafe leaving behavior creates a major barrier to relationship health and personal safety.

### Progress measurement

Progress will be measured by improved communication about plans, reduced impulsive decisions in social contexts, and increased participation in safe and structured community interactions without elopement. Progress will also be tracked through improved ability to maintain respectful communication and follow agreed safety expectations.

### ESS Staff responsibilities

ESS staff will provide continuous supervision and coaching to reduce unsafe social decisions, support safe community participation, and reinforce communication and boundaries. Staff will monitor risk patterns and intervene early when behavior indicates possible unsafe leaving or escalation.

### Timeline / expected progress

Relationship growth depends on safety and stability first, and progress will develop gradually as routines strengthen and risk behaviors decrease through continuous supervision and consistent coaching.

## Life Area 8 — Supports at Home

How family and paid supports help Eric in the home, and how those supports are organized.

### Goal in this life area

Eric will remain safe and stable at home through organized supports that provide continuous supervision across day and overnight hours, with the long-term goal of reducing crisis incidents and increasing predictable routine participation.

### Why this matters

Eric’s risk is not limited to daytime hours, and his history includes leaving in the middle of the night and being absent for hours without anyone knowing where he is. Home supports must be structured in a way that prevents gaps, because gaps in supervision have already resulted in serious harm and increased legal and safety consequences.

### Current barriers

Family support alone cannot consistently monitor Eric across all hours without burnout, and Eric’s behavior requires immediate response when he leaves without notice. Eric’s refusal to take prescribed medication without support, combined with his unpredictable nighttime leaving, creates a level of risk that requires organized paid staffing and overnight monitoring safeguards.

### Teaching & support strategies

Staff will provide structured supervision that supports routine-building, medication adherence, and immediate intervention when elopement risk increases. Staff will also implement overnight monitoring strategies and prevention routines to address nighttime leaving, including structured bedtime routines and safety planning that reduces opportunities for unplanned departure.

### Progress measurement

Progress will be measured by reduced incidents of leaving without notice, increased medication adherence, improved routine participation, and fewer safety escalations requiring crisis response. Progress will also be tracked by improved communication before leaving and increased time spent safely engaged in planned activities.

### ESS Staff responsibilities

ESS staff will provide continuous supervision during the day and overnight safety monitoring, coordinate closely with family, maintain structured routines, and document incidents and progress. Staff will respond immediately to elopement risk, reinforce safety agreements, and ensure medication routines are followed reliably.

### Timeline / expected progress

Support effectiveness will show through gradual stabilization and reduced incidents over time, but progress depends on consistent implementation without gaps, including sustained overnight monitoring due to Eric’s nighttime leaving pattern.

## Life Area 9 — Transportation / Getting Around

How Eric gets around (walking, rides, public transit) and what travel skills he wants to build.

### Goal in this life area

Eric will improve safety around transportation and community movement by learning to communicate his plans, remain within agreed boundaries, and practice supervised community access in a predictable way.

### Why this matters

Eric’s pattern of leaving without notice creates serious transportation-related risk because no one knows where he is going or how he is traveling. Safety in transportation is directly tied to preventing repeat harm, accidents, legal involvement, and victimization.

### Current barriers

Eric leaves the home unexpectedly and can be gone for hours without notifying anyone, which prevents safe planning and supervision. Eric’s prior accidents and severe safety incidents demonstrate that independent movement is not safe at this time, and nighttime leaving increases risk substantially due to reduced visibility, fewer supports available, and higher vulnerability.

### Teaching & support strategies

Staff will teach Eric to communicate his plan before leaving and will practice structured community outings with consistent supervision, including safe route planning and boundaries that reduce risk. Staff will coach Eric in decision-making in real time and will reinforce safe behavior through consistent expectations. Staff will also implement prevention strategies overnight to reduce nighttime leaving and the associated transportation risk.

### Progress measurement

Progress will be measured by reduced unsupervised departures, improved communication before leaving, increased ability to participate in planned supervised outings, and decreased incidents of being absent for unknown periods. Progress will also be tracked through consistent adherence to safety agreements.

### ESS Staff responsibilities

ESS staff will provide continuous supervision to prevent unsafe community movement, monitor whereabouts, and coach Eric during all community access. Staff will document patterns, adjust strategies, and coordinate with family when risk increases, including overnight monitoring to prevent nighttime departures.

### Timeline / expected progress

Transportation safety progress will occur only after sustained reduction in elopement behavior and improved routine stability, and the timeline depends on consistent supervision across all hours because unsafe leaving occurs unpredictably.

## Section 5 — Individual Outcomes (Summary)

### Outcome 1 — Community Engagement

Ties directly to IPP goals and SDP service domains.

### Goal

Eric will participate in safe, structured community activities with staff supervision in a predictable way that reduces risk and increases stability.

### Why this matters

Eric cannot safely engage in the community independently due to unpredictable leaving and documented history of harm and accidents, and structured community engagement is necessary to build stability without increasing risk.

### Current barriers

Eric’s absence of a daily schedule, lack of structured obligations, and frequent elopement create uncontrolled community exposure where safety cannot be ensured.

### Teaching & support strategies

Staff will schedule predictable community activities, provide in-the-moment coaching, and reinforce safety agreements to reduce impulsive leaving and unsafe decisions. Staff will support community access during daytime hours and will implement overnight safeguards because risk is present across all hours.

### Progress measurement

Progress will be measured by increased participation in planned community activities and reduced unplanned absences, along with improved communication before leaving and decreased risk incidents.

### ESS Staff responsibilities (John Doe)

ESS staff will provide continuous supervision, coach safe decision-making, monitor whereabouts, and document community participation and safety outcomes.

### Timeline / expected progress

Eric’s community engagement will improve gradually once safety incidents decrease and routine structure becomes consistent through continuous supervision and overnight monitoring.

## Outcome 2 — Independent Living Skills

Daily living & functional independence.

### Goal

Eric will build basic independent living habits through structured routines and supervised practice at home so he can increase stability and reduce reliance on crisis-driven supports.

### Why this matters

Independent living goals cannot be achieved while Eric lacks routine, refuses medication without support, and leaves unpredictably at all hours, because stability is the foundation for every life skill.

### Current barriers

Eric has no consistent daily schedule and lacks follow-through with routine responsibilities, and his elopement behavior disrupts any attempt to build daily habits.

### Teaching & support strategies

Staff will establish daily structure, practice routines consistently, and provide hands-on coaching to increase responsibility and follow-through. Staff will support overnight safety planning because nighttime leaving disrupts stability and increases risk.

### Progress measurement

Progress will be measured by increased routine participation, improved follow-through, and reduced incidents of leaving without notice, along with stronger consistency in daily responsibilities.

### ESS Staff responsibilities (John Doe)

ESS staff will provide continuous supervision, teach routines in real time, prevent disruptions from elopement, and document progress toward stability and daily living habits.

### Timeline / expected progress

Skill-building will be gradual and requires consistent supervision across all hours to prevent repeated setbacks caused by unpredictable absences.

## Outcome 3 — Health & Safety

Medical, behavioral, and general safety stability.

### Goal

Eric will remain safe and stable through continuous supervision, reliable medication support, and structured monitoring that prevents elopement-related harm and reduces crisis incidents.

### Why this matters

Eric has a history of severe harm and unsafe outcomes when unsupervised, including being shot and involvement in accidents, and he also has ongoing legal vulnerability due to criminal history and upcoming court requirements.

### Current barriers

Eric refuses medication without direct support and leaves without notice, including overnight, creating high risk for injury, victimization, and legal consequences.

### Teaching & support strategies

Staff will provide medication prompting and monitoring, reinforce safety routines, implement elopement prevention strategies, and provide immediate intervention when risk escalates. Staff will maintain overnight safety monitoring because night hours are a known risk period for leaving.

### Progress measurement

Progress will be measured by consistent medication adherence, reduced elopement incidents, improved safety compliance, and reduced crises requiring emergency response.

ESS Staff responsibilities (John Doe)

ESS staff will provide continuous supervision, maintain safety monitoring across day and overnight hours, coordinate with family as needed, and document safety incidents and stabilization progress

Timeline / expected progress

Safety stabilization requires sustained supervision without gaps, and improvement is expected over time as routines become consistent and incidents decrease.

## Outcome 4 — Behavioral / Emotional Regulation

Helps RC see the behavioral support structure clearly.

Goal

Eric will reduce impulsive behavior and improve emotional regulation through real-time coaching and consistent structure so that unsafe leaving and crisis escalation decrease.

Why this matters

Eric’s impulsivity and emotional escalation contribute directly to elopement behavior and unsafe decisions that have already resulted in serious harm and increased legal risk.

Current barriers

Eric does not reliably regulate stress independently and is more likely to leave without notice when bored, frustrated, or feeling controlled, including leaving at night.

### Teaching & support strategies

Staff will provide immediate de-escalation support, teach coping strategies during real situations, and reinforce boundaries consistently. Staff will implement overnight monitoring and prevention strategies because emotional dysregulation and impulsive leaving occur outside typical service hours.

### Progress measurement

Progress will be measured by fewer escalations, reduced leaving without notice, increased use of coping strategies with prompting, and increased ability to remain engaged in structure during stress.

### ESS Staff responsibilities (John Doe)

ESS staff will provide continuous supervision, intervene early, coach regulation skills, and document triggers and progress to adjust strategies effectively.

### Timeline / expected progress

Behavioral regulation will improve gradually through consistent practice and continuous supervision that prevents repeated crises and reinforces stability.

## Outcome 5 — Communication & Self-Advocacy

Supports Eric to speak up, request, refuse, and direct his life.

### Goal

Eric will improve safe communication by learning to notify supports before leaving, request help when stressed, and participate in supported decision-making that reduces risk.

### Why this matters

Eric’s safety is directly impacted by his lack of communication about whereabouts and needs, and improved advocacy and communication are required for stability, legal compliance, and long-term independence goals.

### Current barriers

Eric leaves without notice and may not communicate plans, which prevents safe monitoring and immediate support. Eric’s lack of routine and medication refusal without support further reduces consistent participation in self-advocacy.

### Teaching & support strategies

Staff will teach Eric to communicate plans using consistent scripts and structured check-in routines, reinforce notification expectations, and coach him to request support instead of leaving impulsively. Staff will support overnight monitoring because communication breakdown often occurs during nighttime leaving.

### Progress measurement

Progress will be measured by increased communication before leaving, improved participation in check-ins, reduced unknown absences, and increased use of support requests during stress.

### ESS Staff responsibilities (John Doe)

ESS staff will provide continuous supervision, prompt communication routines, coach decision-making in real time, and document progress and barriers to strengthen consistency.

Timeline / expected progress

Communication improvements will occur after sustained routine structure is in place and elopement incidents decrease through continuous supervision and consistent reinforcement.

## Section 6 — Natural & Paid Supports

### Circle of support

Shows why ESS is needed alongside family and community.

Natural supports (e.g., John Doe)

Eric lives with his family and his mother remains involved as a primary support, but Eric’s needs exceed what natural supports can safely provide because his leaving behavior occurs unpredictably and includes overnight elopement. Family support alone cannot reliably monitor Eric across all hours without gaps, and gaps in supervision have already resulted in serious harm and safety incidents.

Paid supports (ESS Staff)

Eric requires paid agency-level support that provides continuous supervision during the day and structured overnight safety monitoring because risk behavior is not limited to daytime hours. Paid support is necessary to maintain safety, ensure medication adherence, prevent elopement-related harm, and establish routine stability when Eric is not engaged in work, school, or a day program.

Justification for paid supports

Eric has a documented history of severe harm and unsafe outcomes when supervision is not present, including being shot and involvement in accidents, and he has a criminal record with upcoming court involvement that increases the need for preventative structure and consistent monitoring. Eric frequently leaves the home without notice for hours at a time, and he also leaves in the middle of the night, creating an ongoing risk that cannot be managed by part-time support or drop-in services. Eric is prescribed medication but refuses to take it without direct support, and medication noncompliance increases instability and risk for unsafe decisions. Because Eric’s risk is continuous and unpredictable, his support must be organized to provide consistent coverage, monitoring, and immediate response capacity across both daytime and overnight hours.

### Hours needed per month

Eric requires support hours that reflect continuous supervision and monitoring needs across all hours, including daytime structure and overnight safety monitoring, because his elopement behavior occurs at unpredictable times and has resulted in serious harm. A support plan with gaps is not sufficient for safety stabilization, and consistent coverage is required to prevent recurrence, improve medication adherence, and build the routine stability needed for long-term goals.

## Section 7 — Risk & Mitigation

### Risks and protection plan

Supports dignity of risk while keeping Eric safe.

### Behavioral risks

Eric demonstrates unpredictable elopement behavior, including leaving during the day and overnight without notice, and he may remain absent for hours with unknown whereabouts. This behavior creates immediate safety risk and requires consistent monitoring and rapid response.

### Medical risks

Eric is prescribed medication but does not reliably take it without direct supervision, which increases the risk of instability and unsafe decision-making. Without monitoring, medication refusal becomes a major safety risk and contributes to behavior escalation.

### Environmental risks

Eric is at elevated risk of harm when unsupervised due to past severe incidents and vulnerability in uncontrolled settings. A lack of supervision increases the likelihood of entering unsafe environments and experiencing victimization or injury.

### Community risks

Eric’s unpredictable absences, limited planning, and lack of communication about whereabouts create serious community risk because supports cannot ensure safety, and his history indicates that unsupervised community exposure has led to accidents and severe harm.

### Crisis plan

If Eric leaves without notice, staff will immediately initiate the agreed safety response plan by notifying family, attempting rapid location and return to safety, and implementing increased monitoring upon return. If Eric refuses medication, staff will implement immediate medication adherence protocols that include direct prompting, supervised administration routines, and documentation with family coordination as needed.

### Mitigation strategies

Risk will be mitigated through continuous supervision, consistent daily structure, direct medication monitoring, and overnight safety monitoring to prevent nighttime elopement. Staff will track patterns and triggers, intervene early during escalation, reinforce safety agreements consistently, and adjust strategies to reduce repeat incidents and stabilize behavior across all hours.

## Section 8 — Future Vision

### Eric’s future direction

Connects today’s supports with long-term outcomes.

#### Eric’s preferred future

Eric wants to live a stable adult life where he has a real job, works as a plumber, finds love, and eventually has his own place.

#### Goals for independence

Eric’s independence goals will be approached step-by-step, beginning with safety stabilization, medication adherence, and routine consistency, because independence without safeguards has already resulted in serious harm and unsafe outcomes.

#### Community involvement

Eric will participate in the community through structured, supervised activities that build responsible decision-making and predictable routines, with the goal of gradually increasing safe access as elopement incidents decrease.

#### Long-term direction

With continuous supervision during the day and overnight safety monitoring, Eric can stabilize, reduce unsafe leaving behavior, increase medication adherence, and begin consistent participation in structured activities that support vocational progress toward plumbing, healthier relationships, and eventual housing readiness.

## Section 9 — PCP Agreement & Signatures

### Eric + ESS Staff

Signatures show the team participated and agrees this plan reflects Eric's goals.
